1 topics

1.1 text messages

1.1.1 members

- Jacob
- Aaron

1.1.2 description

text messages can be considered dark data because of their permanent nature they are stored in the cloud and are normally kept well after they are sent and received. This leads to a lot of data storage being needed to store the communications of so many people.

1.2 photographs

1.2.1 members

- Mathew
- Hamza

1.2.2 description

Photos can be considered dark data as many people take lots of photos to capture a precious moment. However these photos stack up over time and the amount of photos can range from hundreds to the millions. This means there must be lots of data storage in order to store the photos.

1.3 video

1.3.1 members

- Kacpar
- Ryan

1.3.2 description

There is an enormous amount of content being uploaded and accessed via the internet, mostly via large video streaming companies social media companies Netflix, Youtube and Twitch. I will research how this is stored and the consequences of having to store so much data.
